

## 3DMAX®

### *Light Mesh*

Developed by a laparoscopic surgeon, the unique shape of 3DMAX® Light Mesh conforms to the inguinal anatomy and meets the specific challenges of laparoscopic hernia repair. The three dimensional shape, sealed edge and medial orientation marker allow for easier positioning than conventional flat mesh and also enhance the speed and simplicity of placement. This lighter-weight version of our popular 3DMAX® Mesh features a large pore knit that provides excellent visibility.
